Professional egress window installation

Safegress is a licensed and authorized full-service installation company of beautiful and compliant egress window systems for businesses and residential homes in New Jersey.

Our well-earned reputation is based on delivering prompt installation services using great window egress products that will turn a basement into a beautiful living space or a productive place of business. Basement window systems installed by Safegress improve the visual aesthetics of a basement while also providing an appropriate means of exiting the basement. We work hard to professionally install an egress window system to make your basement code-compliant, better ventilated, and brighter.

Did you know?

An egress opening is designed to be large enough for a person to climb out of in an emergency. US building codes require each bedroom of a home to have an emergency exit window.

Why Us?

-  We do a thorough and complete job, with quality, convenience, and safety.
-  We use a specialty saw that cuts on the outside of your home to eliminate indoor mess and damage.
-  We add a 12" bed of gravel and a drain pipe to our egress windows to help with drainage.
-  We apply waterproof membrane sealant on all wells.

Your basement deserves to be brighter, better, and safer.
